Easy Cleaning

Castalumina is a compound solid surface developed by our team for bathroom products. Castalumina emerged from the combination of high purity Alumina, created from the mineral known as Boxcide and hi-tech resin.

Castalumina offers unique opportunities for bathroom manufacturers eager to make a difference with their designs.

Washbasins produced with Castalumina are superior to customary washbasins; their appearance is extremely smooth and silky, creating a soft—touch feeling.

Castalumina is more lightweight when compared to customary washbasins. Consequently, shipping costs are more economical, and transportation is easier to manage.

The material has a hygienic, poreless texture that prevents microorganisms from surviving on the surface.

Thanks to its composite and solid structure, Castalumina absorbs the sudden impact shocks that may happen in regular use.

Due to the same structural qualities, the material's thickness is reducible to 10 millimeters without any deformation such as warping or rotation.

Castalumina is highly resistant to all domestic chemicals.

Molds can be made quickly and at economical prices.

From an aesthetic point of view, the material offers flexibility in terms of design. Hence, it is a commonly preferred material by designers.
